

**Project Title:** Science-Specific Writing Resources for SCIE 113 and SCIE 300

**Project Summary** *(150 words maximum)*

We propose to create science-specific writing resources for instructors and students in SCIE 113 and 300. Our objectives are to determine the nature of science students' writing errors, to create high-quality learning activities to address these errors, to determine appropriate technologies to deliver these activities to instructors and students, and to contribute science-specific writing activities to existing programs at UBC. This project will allow students in SCIE 113 and 300 to learn with a study plan specific to their individual needs. We will evaluate our project in a number of ways, including student advisory group feedback, pilot testing of instructional resources, course evaluation surveys, feedback from focus groups and/or student interviews, expert reviews, and tracking writing skills.
